

FM501TK1/TK2 Filter Buggy with Tank

Designed for live flushing of bearings while maintaining critical oil level.

The CareTaker FM501TK1 and TK2 filter buggies have been developed to address the specific task of flushing bearings as found in power generating units. This task is generally performed 'live' to allow the power generators to continue operation.

In order to maintain critical oil supply in bearing housings, these models feature an auxiliary tank which supplies the oil necessary to protect the bearings during the filtration process.

Features and Benefits

- Filtration of any type or brand of fluid.
- Flow rates to your requirements.
- Air Sentry air dessicant breather guards against ingress of moisture.
- High quality Australian-made Filter Technology 2 micron depth filtration.
