

FM504 Mobile Filtration Buggy

The portable solution for kidney loop filtration of fluids.

Used for both oil and fuel filtration applications. Typical uses include hydraulic oil reservoirs, gearboxes, final drives and blow/injection molding equipment. Kidney loop system and quick release couplings allow oil to be filtered while the machine is still in service.

Fuel compromised by dust, rust and other contaminants such as algae can be filtered to ISO standards, which is particularly important in remote area operations.

Features and Benefits

- Filtration of any type or brand of fluid.
- Flow rates to your requirements.
- 4 x high quality Australian-made Filter Technology 2 micron depth filtration.
- Electric motor.
- Pressure relief valve.
- Pressure gauge.
- Hour run meter.
- Element change light.
- Pressure differential switch.
- Emergency stop button.
- 10 ft suction and return hoses.
- 3/4" quick release couplings.
- Two wheeled HD trolley.
